

T-CLAMP **ULTRA+™**

Blades For Face Grooving Operations

USES STANDARD TOOL BLOCK

Ingersoll has extended its T-Clamp Ultra Plus blade program to include products for face grooving operations. The new blades have been designed to produce deeper grooves with a wider range of diameters compared to integral holders, providing many advantages and additional options when conducting face-grooving operations.

These blades will fit into any standard block that accepts 32mm (1.26") blades, and provide two cutting ends. The blades will also accept double-end inserts for maximum economy, or single-end inserts for groove depths that exceed the length of the insert.

- **FEATURES**
- Deeper face grooving compared to integral holders
 - Wider range of diameters in facing operations.
 - Double ended pocket.
 - Uses standard tool blocks & extractors
 - Uses TDC/TDJ/TDFT & TDXU inserts. Single-end inserts are also available when customers need grooves deeper than the length of the insert.

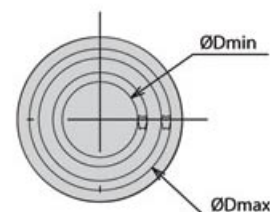

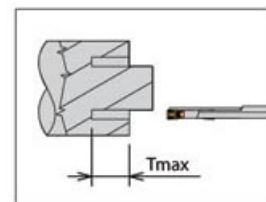

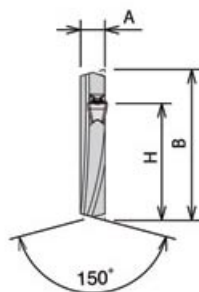

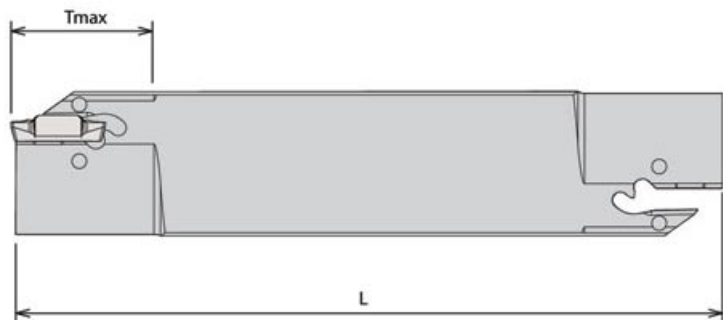

Minimum diameter of initial face operation for TDC/TDJ/TDT inserts

Using insert	Insert Width inch(mm)	Dmin inch(mm)	Remark
TDC TDJ TDT	.118 (3)	1.73 (44)	Use TDFT, TDXU type if machining diameter is smaller than Dmin
	.157 (4)	1.65 (42)	
	.197 (5)	1.97 (50)	
	.236 (6)	1.89 (48)
