## ISO TURNING CBN and PCD Item Description Change Notification

To accurately reflect their actual tolerances, the "M" class of ISO Turning CBN and PCD inserts have been changed to "G" class. **This change only applies to the item descriptions...**none of the physical aspects such as geometry, shape, tolerance, grade or color have been modified. Item numbers will remain the same.

Product families impacted by this change, with old and new prefix, are shown below:

Old Prefix		New Prefix
CNMA	→	CNGA
DNMA	→	DNGA
SNMA	→	SNGA
TNMA	→	TNGA
WNMA	→	WNGA
CNMN	→	CNGN
RNMN	→	RNGN
SNMN	→	SNGN

The new descriptions are being handled as a "running change" to our packages. Existing stock will remain labeled with the old description, but all new production orders will use labels with the new description.

The Ingersoll website has been updated to reflect the new item descriptions, and any future publications will also reference the new descriptions.

Please contact Ingersoll Product Management with any questions.
