### CHIP THINNING

When  $ae$  is less than 25%,  
**Chip Thinning Calculator**  
is recommended to ensure  
 $h_{max}$  is within  $fz$  range. ▶

Note: Feed and speed recommendations are starting operating parameters. They are only guidelines from which further optimization should take place. Operating parameters are influenced by many machining variables. These variables may cause for reductions in feeds and speed or dramatic increases. Additionally, DOC and WOC may need to be revised to optimize the tools performance.
