Digital Fine Boring Heads Now IP69K Rated Against Dust & Coolant

All TRE digital head's level of protection against coolant and dust will now be increased from IP67 to IP69K ensuring optimal performance even under high pressure conditions.

The IP69K upgrade, which is perfectly interchangeable with existing MHD connection, will gradually replace the traditional IP67 version starting with the most common TRE50 boring head. Over time we will be phasing out all TRE heads as IP67 stock levels diminish.

New item numbers and descriptions have been taken out for the new IP69K version TRE heads. The next page lists the old IP67 item number and descriptions along with the new IP69K item number and description to aid in making this a smooth and painless transition.

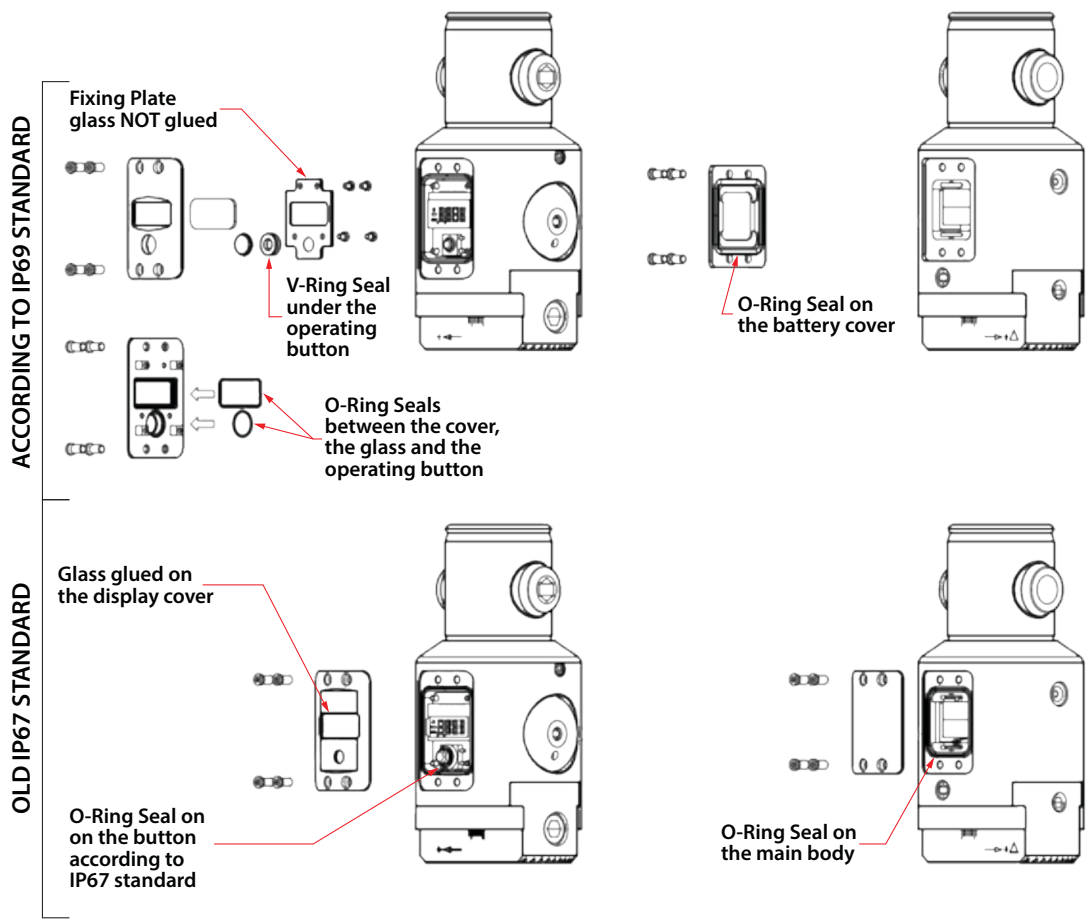

Features & Benefits

- Improved IP69K rating for all TRE digital fine boring heads
- No ingress of dust allowing complete protection against contact (dust-tight)
- High level of protection against coolant (water-tight)
- Upgraded from older IP67 rated digital fine boring heads
- Compatible with existing MHD system
- TRE kits also included in IP69K upgrade
